

@ Rob|Arch 2016 in Sydney, Sina Mostafavi & Henriette Bier published a paper on MID2RP. Sina Mostafavi presents the one-to-one prototyping procedures of informed robotic 3D printing and multimode robotic production projects. The presentation addresses design, development and implementation of **Materially Informed Design to Robotic Production (MID2RP)** systems, with the goal to achieve performative **porosity** and **hybridity** in architecture at various scales, ranging from macro to micro.

Presentation on March 19th, more info:
